EVDS
EQUINE VETERINARY &
DENTAL SERVICES Pty Ltd

Established in 2002 and focused on horses, Equine Dental & Veterinary Services (EVDS) provides quality equine dental services, instruments and education to horse owners and veterinarians throughout Australia and New Zealand, a one-stop shop for all your equine dental requirements.

Dr. Oliver Liyou, EVDS Principal, is recognised Australia-wide, and internationally as one of Australia's leading equine dental veterinarians.

"His keen interest in equine dentistry has grown with each day of practice, participation in continuing educational events and the organization and production of dental events in Australia. He has done everything possible to gain knowledge in this relatively new field of equine practice and has become an international leader in its progression ... a forerunner in the field of equine dentistry."

Dr. Jack Easley

American Veterinary Dental College/Equine - principal author of the "textbook bible" of *Equine Dentistry* – Editions 1, 2 & 3

EVDS is committed to continually improve the products and services to exceed the expectations of our horse owners and veterinarians on each occasion that we interact with them.

Training

EVDS is the leading training centre in Australasia for equine vets wanting to learn and master equine dentistry. It provides the training you need to access this market and support your owners, and their horses.

EVDS has been on the forefront of equine dental Training for vets, providing hands-on educational opportunities to veterinarians from all over the world. Over 650 vets since 2002 have learnt and built their skills at EVDS Workshops and Wet Labs.

Equipment and Dental Instruments

This training is backed with quality equine dental equipment and instruments. EVDS has developed and sells equine dental equipment and instruments.

All dental instruments are tried and tested by Dr Oliver Liyou before EVDS put its name to them. Many have been modified by Dr Liyou as he discovers improvements that can be made by using them in the field. It is a matter of pride that they only sell the best quality instruments.

**EVDS**

WE ARE THE SOLE POWERFLOAT AUSTRALIA & N.Z. DISTRIBUTORS

POWERFLOAT QUICK CONNECT KIT #1: BASIC

PF0004**EVDS**

Variable speed (0 to 4000 rpm) 20 volt lithium ion motor with nano technology. The cordless motor is adapted so that different shafts can be attached according to need.

Included is an attachable Long Right Angle guarded shaft with diamond disc. The guarded abrasive disc can be rotated into the up or down position for floating of the upper and lower dental arcades. The basic Quick Connect System allows the practitioner future versatility to add other attachments to the system.

PowerFloat Quick Connect Kit #1: Basic includes:

- Quick Connect PowerFloat model with Long Guarded Right Angle Attachment
- 100% Diamond Grinding Wheel
- 2 x DeWalt 20 volt Lithium NANO battery packs
- 1 x DeWalt 20 volt Lithium NANO battery charger with 240v plug
- PowerFloat Wheel Removal Tool
- Grease Gun
- Additional tube of grease (Premium Food Machinery Grade)
- Two Nylon Mouth Gags (Large & Small size included)
- Cleaning brush & hand towel
- Pelican Carry Case - new & improved (Lifetime Warranty)
- Instructional DVD & Owner's Manual

POWERFLOAT ULTRALITE CORDLESS KIT #1: BASIC

The preferred model by veterinarians who have shoulder and elbow discomfort, the PowerFloat UltraLite Quick Connect Drill weighs just under 2.5 Kg and operates up to a maximum of 3250 rpms. The UltraLite model drill comes with two batteries and a charger, and in Kit #1 is supplied with the Guarded Right Angle shaft with diamond disc, which can be rotated into the up or down position for floating of the upper and lower dental arcades.

Ultralite Kit #2, Kit #3 & Kit # 4 also available

PowerFloat Quick Connect Kit #1: Basic includes:

- Guarded Right Angle shaft with diamond disc
- Pelican® Carry Case (Lifetime warranty)
- PowerFloat Wheel Removal tool
- Grease Gun (lubricant applicator)
- Grease Tube: 15oz tube (Premium Food Machinery Grade)
- Two Nylon Mouth Gags (large and small size included)
- Cleaning Brush
- Hand Towel
- Operators Manual

POWERFLOAT QUICK CONNECT KIT #2: CHAMFER

PF0005

PowerFloat Quick Connect Kit #2: Chamfer includes:

- Kit #2 contains all the items in the PowerFloat Quick Connect #1 Kit: Basic (see previous page)
- Plus attachable Slim Right Angle shaft with chamfer burr

The chamfer burr is used for precise angled floating of the sharp enamel points on the upper and lower arcades.

POWERFLOAT QUICK CONNECT KIT #3: CHAMFER + ROTARY

PF0006

PowerFloat Quick Connect Kit #3: Chamfer + Rotary includes:

- Kit #3 contains all the items in the PowerFloat Quick Connect #1 Kit: Basic (see previous page)
- Plus attachable Slim Right Angle shaft with Chamfer Burr
- Plus attachable Long Rotary Shaft
- Plus Solid Carbide Round Nosed Burr
- Plus Flared Diamond Burr

The narrow cylindrical round nosed carbide burr allows easy access to the rear molars to float miniatures and donkeys. The flared diamond burr allows easy access to the shard caudal ridge of the last upper molar tooth. The chamfer burr is used for precise angled floating of the sharp enamel points on the upper and lower arcades.

POWERFLOAT QUICK CONNECT KIT #4: COMPLETE

PF0007

PowerFloat Quick Connect Kit #4: Complete includes:

- Kit #4 contains all the items in the PowerFloat Quick Connect #1 Kit: Basic (see previous page)
- Plus attachable Slim Right Angle shaft with Chamfer Burr
- Plus attachable Long Rotary Shaft
- Plus Solid Carbide Round Nosed Burr
- Plus Flared Diamond Burr
- Plus attachable Short Rotary Shaft

Both the diamond flared burr and the cylindrical round nosed carbide burr can be used with the long rotary shaft.

The narrow cylindrical round nose carbide burr is ideal for caudal hooks and allows easy access to the rear molars to float miniatures and donkeys. The cylindrical burr can also be placed in the short rotary shaft to be used to correct incisor teeth malocclusions. The flared diamond burr allows easy access to the shard caudal ridge of the last upper molar tooth. The chamfer burr is used for precise angled floating of the sharp enamel points on the upper and lower arcades.

Please speak with EVDS about shaft compatibilities with older models.

LONG ROTARY SHAFT WITH CARBIDE BURR

The Long Rotary attachment can operate several different burrs in the up or down position. Two removable guards allow for guarded and unguarded operation of grinding burrs. Compatible burrs include: Large/small diamond apple core, Round-nose cylindrical burr and Flared-end rotary burr for work on the caudal molars.

SHORT ROTARY SHAFT WITH CARBIDE BURR

The Short Rotary shaft extends the ability of PowerFloat Quick Connect by allowing the incorporation of a variety of specially-designed burrs. This shaft is designed to accommodate all available PowerFloat rotary burrs.

SLIM RIGHT ANGLE WITH CHAMFER BURR

The slim right angle has a long shaft ending in a slim unguarded right angle. This attachment connects to the Quick Connect in the left or right horizontal position. It accepts the guarded chamfer burr which is used to float sharp enamel points off the upper and lower arcades. The apple core burr can also be used on this shaft.

LONG GUARDED RIGHT ANGLE WITH DIAMOND DISC

The slim right angle has a long shaft ending in a slim guarded right angle. This attachment connects to the Quick Connect in the left or right horizontal position. Also necessary to reduce hooks, ridges, waves and ramps.

UNGUARDED RIGHT ANGLE-SHORT WITH APPLE CORE BURR

This attachment can be purchased separately. The apple core burrs are introduced into the mouth end on, while the free hand abducts the corner of the mouth to tighten the mandibular frenulum, allowing gentle contouring and smoothing of the sharp edges of the lower front cheek teeth. The upper front cheek teeth are contoured in a similar manner.

SHORT GUARDED RIGHT ANGLE WITH DIAMOND DISC

This shortened version of the guarded right angle is used for the reduction of incisor malocclusions. It is designed for veterinarians who wish to have an attachment that allows incisor teeth reductions from a closer range than can be achieved with the longer guarded right angle attachment. Compatible with all PowerFloat grinding wheels and diastema burrs.

CHAMFER BURR

PF0033

Attaches to a Slim Right Angle Quick Connect attachment. The guarded diamond burr enables reduction of sharp enamel points on the upper and lower dental arcades at variations of a 45 degree angle. The specially designed chamfer guard protects mucosal tissue during burring procedures. It has made routine floating right to the back of the mouth even easier. Also available in the smaller size (PF0033A).

UPPER 11 HOOK BURR

PF0034

Designed to smooth the caudal sharp edges and hooks on the last upper molars (11's). Stainless steel burr with medium grit diamonds, rounded smooth upper surface to prevent soft tissue abrasion. Compatible with the PowerFloat Long Rotary Shaft.

LOWER 11 HOOK BURR

PF0506

The lower 11 diamond burr allows easy access to the sharp caudal edges of the last lower molar teeth. Compatible with the Powerfloat Quick Connect Rotary shafts.

DIAMOND APPLE CORE BURRS

The Diamond Apple Core burrs are used to contour the upper and lower front teeth (06s), and the canine teeth. The large model is designed for medium to large horses.

Small Burr **PF0044**

Large Burr **PF0045**

ROUND NOSED CYLINDRICAL CARBIDE BURR

PF0035

Round Nosed Carbide burr is used to float the rear teeth in miniatures and donkeys. This burr attaches to the long or short rotary shaft. When attached to the short rotary it is used for reductions of incisor teeth. It is ideal for caudal hook reduction.

DIAMOND GRINDING DISC

PF0030

The latest disc available, is by far the smoothest, requiring less sedation for the patient. With correct application, trials have shown it to last approximately 120-150 horses.

DIASTEMA BURRS - SET OF 3

PF0036

Diastema Burrs also available separately.

PF0039

PF0038

PF0037

This set of three tungsten carbide burrs are sized and shaped to allow a full diastema gap widening procedure. The burr shapes are narrow cone, wide cone and slimline burr.

POWERFLOAT DISK REMOVAL TOOL

PFA1012

The simplest and easiest method for changing discs on the PowerFloat.

DEWALT 20V RECHARGEABLE BATTERY PF32

20 volt rechargeable battery for Quick Connect PowerFloats or PowerFloats - all current models of Powerfloat kits come with 20v batteries.

DEWALT 20V MAINS BATTERY CHARGER PF31

20 volt battery charger, mains supply only - for Dewalt 20v batteries that come with current model PowerFloats. With 240v plug for Australia and New Zealand.

18V TO 20V CONVERSION KIT PF1214KIT

The 18v to 20v Conversion Kit allows for use of the 20v Max DeWalt lithium ion batteries in 18v Powerfloats.

Purchasing these items in the kit as opposed to individually will save you over \$60! And with the 18v DeWalt batteries being discontinued, it makes sense to invest in the conversion kit.

- Do not leave battery in adapter when not in use
- Adapter is only to be used with DeWalt 20v Max batteries

Convertor sold separately

GREASE GUN FOR 450g CARTRIDGES PF24

Pistol grip grease gun (holds 450g grease cartridges), fits straight into PowerFloat grease port.

GREASE GUN FOR 400g CARTRIDGES PFR1020

Pistol grip grease gun (holds 400g grease cartridges), fits straight into PowerFloat grease port.

POWERFLOAT GREASE GUN PFA1009

6½ inch (16.5 cm) long taper point grease gun. The tapered end fits into the 2 grease ports which are located on the right angle area of the PowerFloat. The grease is injected into the grease ports with force by a plunger effect.

450g GREASE CARTRIDGE PF22

Premium food safe grease.

400g HIGH TEMPERATURE GREASE CARTRIDGE PFR1010

Premium food safe grease for high temperature environments, eg. suitable for Northern Queensland.

Bring your old PowerFloat into the future

If you are considering upgrading your older model PowerFloat to a 20V Quick Connect, so you have the ability to interchange shafts in seconds...

WE CAN CONVERT IT
to the Quick Connect System for you!

Expert Conversions within 2-7 days!

EVDS PowerFloat Technician Chris Spry can **convert your old PowerFloat** to a **Quick Connect System** within 2-7 days, and send it back with **a brand NEW** Quick Connect Shaft with flat disk.

Give your old PowerFloat a new lease of life!
Phone Chris direct on 0437 721 006
for more information.

To increase the efficiency and standard of your dentals, talk to EVDS about the available Chamfer Burr shaft. As the older style 14V drill becomes obsolete, we will be able to supply you with a new 20V lithium ion PF Quick Connect drill unit, bringing you up-to-date with PF technology and with minimal operational downtime.

Book it in!

Call EVDS now on **02 6642 4700**
or email us at **vets@evds.net.au**

TERAFLOAT

POWER DENTISTRY

The new Swissvet Terafloat combines 15 years of experience with Swiss engineering.

The Terafloat has all the features a dental float ought to have: it is lightweight, battery-powered, with a flexible shaft, a rotating head, and interchangeable discs or burs. It is water resistant, maintenance free, durable and affordable, and represents a new generation of dentistry instruments for routine or advanced procedures. Designed and manufactured in Switzerland.

TERAFLOAT LED

Terafloat is a great instrument for routine dentistry and users particularly appreciate the light weight, the built in LED lights and the simple and durable construction.

We are excited to offer a few additions:

- **The Terafloat motor** has a new lock for the variable speed trigger. 
- **The Terafloat head** now comes with the option to use the grinding disk with or without a disc guard. 
- **A slimline shaft** with built in LED lights and a well-guarded diamond burr. Its low-profile design makes it perfect for ponies or other cases where space is restricted. 

These new shafts fit the standard Terafloat motor.

A more economical solution is now available with Terafloat Eco.

TERAFLOAT ECO

The Eco model carries the same components as the Terafloat LED model with the exception of the shaft: instead of LED aluminum shafts the instrument uses a simple stainless-steel shafts.

Three Eco shafts are available: Eco straight, Eco curved and EcoTurnflex. This model also uses a more affordable motor without the LED wiring.

Terafloat Eco has its own Ponyshaft as well.

EVDS

WE ARE THE SOLE DISTIBUTORS FOR TERAFLOAT IN AUSTRALIA

TERAFLOAT ECO

ECO BASIC SET

T-0036G

1 x Motor ECO, 2 x Batteries 3.0Ah, 1 x Charger, 1 x Routine ECO shaft with guarded rotary disc T3-C10, 1 x Tool Bag, 1 x Long case. Also available with Head with non-guarded rotary disc T2-C10 (T-0036).

ECO STANDARD SET

T-0042G

2 x Motors ECO, 3 x Batteries 3.0Ah, 1 x Charger, 1 x Routine ECO shaft with guarded rotary disc T3-C10, 1 x Routine ECO shaft with non-guarded Apple Core Burr A2-M8, 1 x Tool Bag, 1 x Long case. Also available with a head with non-guarded rotary disc T2-C10.

TERAFLOAT LED

LED BASIC SET

T-0004G

1 x Motor LED, 2 x Batteries 3.0Ah, 1 x Charger, 1 x Routine LED shaft with guarded rotary disc T3-C10, 1 x Tool Bag, 1 x Long case. Also available with a head with non-guarded rotary disc T2-C10.

LED STANDARD SET

T-0014G

2 x Motors LED, 3 x Batteries 3.0Ah, 1 x Charger, 1 x Routine LED shaft with guarded rotary disc T3-C10, 1 x Routine LED shaft with non-guarded Apple Core Burr A2-M8, 1 x Tool Bag, 1 x Long case. Also available with a head with non-guarded rotary disc T2-C10.

TERAFLOAT FLX

FLX BASIC SET

T-0077G

1 x Motor Eco, 1 x Belt with Holster, 1 x Batteries 6.0Ah, 1 x Charger, 1 x Flexible Drive Shaft, 1 x Terafloat FLX Shaft with guarded rotary disc T3-C10, 1 x Tool Bag, 1 x Long Case. Also available with a head with non-guarded rotary disc T2-C10.

FLX STANDARD SET

T-0083G

1 x Motor Eco, 1 x Belt with Handpiece Holster, 1 x Batteries 6.0Ah, 1 x Charger, 1 x Flexible Drive Shaft, 1 x Terafloat FLX shaft with guarded Rotary disc T3-C10, 1 x Terafloat FLX shaft with non-guarded Apple Core Burr A2-M8, 1 x Tool Bag, 1 x Long Case. Also available with a head with non-guarded rotary disc T2-C10.

TERAFLOAT MOTOR

T-0101

Milwaukee 12v motor with trigger lock, LED ready, no batteries.

Tip not coated.

T-0263

A4 APPLE CORE BURR - DIAMOND COATED + CANINE

T-0217

P1 PONY SHAFT BURR DIAMOND COATED

For Terafloat FLX only.

T-0283

With additional inside coating for canine work.

The 2019 Stainless Steel EVDS Speculum surpasses cheaper speculums on the market by far with its superior quality and five year warranty.

The 2019 Stainless Steel EVDS Speculum has been designed by equine vets to create a high quality, extremely versatile and strong unit to suit all occasions and sized horses. Low maintenance yet very strong biothane poll and nose straps with closely positioned holes for the comfort of the horse. Uniquely designed sidearm hinges produce a spreader effect to keep the sidearms and poll straps away from the horses cheeks.

With six teeth on the ratchets, the speculum is easy to open and close on all horses. The ratchets have been specifically thickened to add extra insurance against breaking.

Closing tabs on the speculum make it easier to close when on the horse. Magnetised half moon plates come standard with the speculum. Optional incisor plates for parrot mouths and optional padded geriatric plates for old horses also available, as well as replacement ratchets.

Features and benefits

Stainless Steel with mirror finish

Professional, aesthetically pleasing. Strong stainless steel which is much more resistant to fracturing as with the commonly used cast metal.

Durable synthetic straps

Flexible, yet strong synthetic straps with no oiling needed.

All straps with holes set with only 15 mm gap in between to allow for closer adjustments

More comfort for the horse, and easier to set the speculum in the correct position - minimising the chance of the horse getting out of the speculum, and biting the arm of the vet.

Poll strap has holes positioned to suit from miniature ponies up to draft horses.

Speculum suits all sizes of horse, ponies and donkeys.

In-built spreader effect

Prevents the side arms and poll straps from pushing the cheeks in, making it easier to file the upper cheek teeth. Also allows the 9" long shafted wolf tooth elevator to be used for extracting wolf teeth in a more precise manner.

Incisor plates have the back lip reduced in height and rounded over.

More comfort to the horses - especially older horses with worn down upper incisors - results in these horses behaving better when having the teeth done.

Higher level of iron in the metal of the incisor plates allows a PowerLite head's magnet to attach directly onto the speculum's incisor plates, removing the need to use adaptor plates for a PowerLite.

Reinforced ratchets

Almost double the thickness of the standard McPherson speculums and Hausman's gags on the market — some of which are fracturing too frequently to be considered safe.

Ratchets with 6 notches

Able to accommodate all size horses, with majority of horses and ponies comfortable on 4 clicks. With the ratchets closer together than normal, it is easier to open the speculum. Can go 5 clicks in order to place the "Vet Only" PowerFloat head directly on the occlusal table of the lower last molars if hooks, ramps or ridges present

Closing tabs at origin of poll straps

Allows for easy closing even when horses are squeezing down on the incisor plates.

Optional plates

Optional incisor plates for geriatric horses and parrot mouth enable the EVDS 2019 Speculum to easily accommodate any horse's mouth.

EVDS PONY SPECULUM

SP02

The EVDS Pony Speculum is ideal for practitioners who do lots of pony/mini dentistry.

Features low maintenance yet very strong biothane poll and nose straps with closely positioned holes for the comfort of the pony, along with uniquely designed sidearm hinges that produce a spreader effect to keep the sidearms and poll straps away from the ponies cheeks. With five teeth on the ratchets, the speculum is easy to open and close, plus the ratchets have been specifically thickened to add extra insurance against breaking. Closing tabs on the speculum make it easier to close when on the pony. Magnetised half moon plates come standard with the speculum. Optional incisor plates for parrot mouths are available, as well as replacement ratchets. Superior quality and five year warranty.

WEDGE (NYLON) SPECULUM

SP03

With the ease and convenience similar to a swail's gag, this speculum is a lot safer to use. The nylon wedge allows the pressure to be distributed over several cheek teeth and will not fracture teeth like a swail's gag. Ideal for filing or x-raying incisors.

Also available for **WEDGE (NYLON) SPECULUM**

REPLACEMENT PLASTIC WEDGES - MEDIUM

SP14

REPLACEMENT PLASTIC WEDGES - LARGE

SP15

ALUMINIUM INCISOR PLATES - PAIR

SP31

Also available individually

ALUMINIUM INCISOR PLATE

SP30

LIYOU X-RAY BLOCK

OE02

The Liyou Wood Block can do what the leading alternative system on the market does, but for less than 15% of the price!

It allows the sedated horses head to be rested on a table surface, for repeatable and consistent radiography angles of both sides of the head for comparison.

The LWB keeps the incisors apart at either 60, 80 or 100 mm so allows for open mouth radiography of the cheek teeth. The most commonly used distance is 80 mm, and that is where it not only protects the lips and tongue from being cut should the head "bounce" its incisors on the table, but it also allows the use of offset DV views of the cheek teeth.

Beautifully finished off with smooth edges and no splinters, this block will last a lifetime and is essential part of any equine radiography kit.

MOUTH PLATE - REGULAR

FOR EVDS SPECULUM

• WHILE STOCKS LAST

SP09

MOUTH PLATE - HALF MOON

FOR EVDS SPECULUM

• WHILE STOCKS LAST

SP10

MOUTH PLATE FOR NON-EVDS SPECULUM

• WHILE STOCKS LAST

SP11

GERIATRIC PLATE - EXTRA SOFT FOR EVDS SPECULUM

SP04.1

Made with high quality magnetized stainless steel with a thick coating of soft rubber which provides excellent comfort for the geriatric horse. They may also be used during surgical procedures, on horses with severe parrot mouth, and on livestock such as cattle which lack upper incisors. Sold as set of two.

MODIFIED GUNTHER SPECULUM

SP-0022

This modified Gunther speculum has all the features of a standard Gunther speculum, but the maxillary incisor plates can deviate to the side, allowing an excursion of the maxilla. This is used to improve the quality of certain radiology views or for certain surgical procedures. Made of stainless steel with a biothane strap.

INCISOR SPECULUM (HORSE & PONY SIZE)

SP12

Tubular speculum for doing incisor work. Fits most horses and ponies mouths.

INCISOR SPECULUM (DRAUGHT HORSE SIZE)

SP13

Tubular Speculum made for doing incisor work. Fits most draught and other heavy horse mouths.

ARCADE SPECULUM - FLOAT HANDLE

SP18

The arcade speculum keeps the tongue and cheeks away from the teeth, allowing better visualisation of the lingual and buccal sides of the cheek teeth, the gingival margins and interproximal spaces. Great for use in doing periodontal treatment. It can also be used as a cheek retractor for demonstrating problems to clients.

PARROT MOUTH PLATE - REGULAR FOR EVDS SPECULUM

SP05

The parrot mouth plate has hinges set so that the lower plate sits back accommodating the lower incisor position.

Also available for **EVDS PONY SPECULUM**

• WHILE STOCKS LAST

SP07

PARROT MOUTH PLATE - HALF MOON FOR EVDS SPECULUM

SP06

Large surface tooth plates for an easier access to the incisor tooth table area. Specially designed for horses with incisor malocclusion. HIGHLY Recommended.

Also available for **EVDS PONY SPECULUM**

SP08

RACHETS & SPRINGS FOR EVDS SPECULUM

SP16

Replacement ratchets and springs for the 2019 EVDS Stainless Steel Speculum (1 pair).

POWERLITE MK IV

PFA1001

PowerLite IV is a portable, battery-operated light source designed to attach to the upper incisor plate of an equine dental speculum. Its compact, water-resistant design makes this product the most reliable and convenient light source available for vets. Features include:

- Latest high powered LED technology, double the brightness of the PowerLite III.
- Powered by lithium-ion rechargeable batteries (x6) for extended operation between charges. Batteries included.
- Simple secure light head attachment and positioning using powerful neodymium magnets.
- Includes speculum adapter plate for non-ferrous speculum incisor plates, plus carry case.

ROUND EQUINE DENTAL MIRROR

OE08

* WHILE STOCKS LAST

The 18 inch polished stainless steel T piece with rigid handle & angled mirror head allows visualization of all areas of the mouth. It can also be used to push the tongue away from the lower cheek teeth. Essential for diagnosing & assessing periodontal disease, cheek tooth pathology, etc.

Also available for **ROUND EQUINE DENTAL MIRROR**

**REPLACEMENT MIRROR FACE
& SILICONE SEALANT - ROUND**

OE08.2

RECTANGULAR DENTAL MIRROR

OE08.1

Stainless steel Dental Mirror designed for optimal viewing of all intra-oral structures including occlusal surfaces, periodontal pockets, and diastemas. 18.5 inch (47 cm) long stainless steel dental mirror with convenient "T" handle. The 10 degree tilted end piece contains a 2 inch (5 cm) diameter mirror.

Also available for **RECTANGULAR DENTAL MIRROR**

**REPLACEMENT MIRROR FACE
& SILICONE SEALANT - RECTANGULAR**

OE08.3

PISTOL GRIP FLUSHING SYRINGE

OE09.2

An essential tool for performing a thorough examination and for flushing periodontal pockets with antiseptic solutions. Plastic cylinder with metal nozzle and rod.

FOOD IMPACTION WATER PICK

OE09.1

Oral flushing attachment for a garden hose - delivers high pressure water to flush out food and debris impacted between teeth and is a useful aid in the treatment of periodontal pockets. Comes with additional spray nozzle and fittings to attach to hoselink as well as regular tap fittings.

DENTAL PICK WITH T PIECE HANDLE

OE10

The dental pick is great for multiple uses: demonstrating pathology to owners, cleaning out and exploring occlusal surfaces, periodontal pockets and diastemas. Polished stainless steel.

DENTAL PICK - THIN TIPPED

OE10.1

The dental pick is great for multiple uses: demonstrating pathology to owners, cleaning out and exploring occlusal surfaces, periodontal pockets and diastemas. Polished stainless steel.

PERIODONTAL DENTAL PROBE

OE11

18 inch (45mm) handle with 1.5 inch (3.8mm) high hook style end, stainless steel dental probe with marker increments every 5mm to assist in measuring the depth of periodontal pockets. Knurled handle for better gripping. The hook design assists in the placement of the probe into pockets in the caudal part of the mouth.

PULP EXPLORER

OE11.5

Pulp exposures in teeth are not uncommon & this tool is ideal for diagnosing them. Total length is 16 inches (40.6cm).

SCREW-IN PROBE HANDLE & POINT SET IN CARRY CASE

OE11.6

The kit comes with a stainless steel handle, three points and a carry bag. The stainless steel handle accepts interchangeable screw-in points (Perio Probe, Pulp Explorer and Scaler). The handle is 8mm wide and 37cm long with knurled grip. Pieces are also available separately.

OE11.6 includes:

PROBE HANDLE - SCREW IN STYLE

OE11.1

SCREW-IN POINT -

OE11.7

PERIODONTAL PROBE

SCREW-IN POINT - PULP EXPLORER

OE11.8

SCREW-IN POINT - SCALER

OE11.9

PERIODONTAL FORCEPS 15mm - LOCKING N10.2

Long-handled, right angled periodontal forceps. Designed to remove forage that accumulates in periodontal pockets and valve diastema between equine cheek teeth. Has locking mechanism. Overall length 40cm, claw length 15mm.

PERIODONTAL FORCEPS 25mm - LOCKING N10.3

Long-handled, right angled periodontal forceps. Designed to remove forage that accumulates in periodontal pockets and valve diastema between equine cheek teeth. Has locking mechanism. Overall length 40cm, claw length 25mm.

DENTAL HALTER WITH ROPE & CLEAT (SIZE "HORSE") PF0091

The Dental Halter is made of heavy duty webbing and reinforced tubing. Designed so that the veterinarian can adjust the horse's head to a comfortable position whilst performing dental work.

Also available for DENTAL HALTER WITH ROPE & CLEAT: PF0093
REPLACEMENT ROPE AND CLEAT
 ROPE and CLEAT also available individually.

STAINLESS STEEL 12 LT BUCKET, ANGLED SIDES OE12

A durable and professional looking stainless steel 12 litre bucket with angled sides. Dimensions: top diameter 32cm; bottom diameter 22cm; height 28cm. Rubber lined in the bottom which helps to protect your tools.

BUCKET BUDDY (STAINLESS STEEL) FOR 12 LITRE BUCKET OE15

Designed to fit OE12 Stainless Steel 12 Litre Bucket, angled sides only. A stainless steel bucket together with the Bucket Buddy is the ultimate way to protect your tools.

SCREW-ON INSTRUMENT HOLDER OE15.1

Screws onto the side of the bucket. Stainless steel. Approx 25cm in length. A great way to protect your tools while providing easy access for use.

WOLF TEETH INSTRUMENTS

COMPLETE WOLF TOOTH SET WT01

This kit will allow you to handle almost any size and shape of wolf tooth including lowers. Once the tooth is loose the 10" forceps spring and narrower head are used to remove the tooth. The burgess set with 4 head sizes will accommodate all sizes of upper wolf teeth.

BEST VALUE

WOLF TOOTH/DECIDUOUS INCISOR FORCEPS 10 INCH WT04

This tool is great for grasping the loosened wolf tooth during extraction, along with retained deciduous incisor teeth. 10.2" (26cm) long, 1.3" (35mm) claw. Essential for incisor extractions.

WOLF TOOTH FORCEPS ANGLED WT05

7" (18cm) long, 1" (25mm) claw.

OFFSET EXTRA LONG WOLF TOOTH ELEVATORS (SET OF 2) 6MM WT13

Used to perform upper wolf tooth loosening where access might be awkward with a straight elevator whilst visualising through an open mouth with a speculum on. Total length is 11.4 inches (29cm). Blade is 6mm wide and curved. Stainless steel. Comes with carry bag.

WOLF TOOTH ELEVATOR 6 INCH - 6mm WT03

This instrument is the most universally useful elevator for extracting wolf teeth without a speculum on. Total length is 6 inches (15.2cm). The blade width is 6mm.

WOLF TOOTH FORCEPS 18cm WITH SPRING & LONGER NOSE WT05.1

Narrow angled head forceps which is used for grasping the loosened wolf tooth during extraction. Has a slightly longer claw than WT05 and a light spring to help avoid applying too much pressure/crushing teeth. Total length is 18cm. Claw length is 3cm.

EXTRA LONG WOLF TOOTH ELEVATOR 8mm- BURGESS HANDLE WT06

Used to perform upper wolf tooth loosening whilst visualising through an open mouth with a speculum on. Total length is 11 inches (28cm). Blade is 8mm wide and curved. Stainless steel with an hard plastic burgess handle for superior grip.

EXTRA LONG WOLF TOOTH ELEVATOR 4mm WT10 6mm WT11 & 8mm WT12

Used to perform upper wolf tooth loosening whilst visualising through an open mouth with a speculum on. Total length is 11 inches (28cm). Stainless steel with an octagonal grip.

All EVDS Hand Tools are made from mirror polished stainless steel. They all are fitted with the comfortable non-slip moulded, colour coded grips that are durable and easy to clean.

Blades for all hand tools sold separately!

STRAIGHT LONG HAND FLOAT 20 INCH

HT01

The blade for this hand float is usually positioned to be used on the pull stroke. With this, the tool is used on the entire lower arcade, and on the upper 4th and 5th cheek teeth. It's total length is 20" (50.8cm). Has coloured comfortable grip. Takes the "M" blade HT08. Blade not included.

Also available for MINIATURE HORSES:

STRAIGHT LONG HAND FLOAT 14.5 INCH

HTA01

• WHILE STOCKS LAST

SLIMLINE HAND FLOAT 20 INCH

HT02

Comes with the coloured comfortable grip. The blade is usually positioned to be used on the pull stroke. The head has a slight angle. With this, the tool is used on the entire lower arcade, upper 11s and on the upper 4th and 5th cheek teeth. 20 inches long from end to end. This hand float is uniquely sized and shaped to allow easy, fast and effective access to the very back sharp points on the upper cheek teeth. Takes the slimline blade HT07. Blade not included.

UPPER PREMOLAR HAND FLOAT 18 INCH

HT03

This 18" (45.7cm) long hand float has back angled head which is 3.25" (8.2cm) long. The blade can be positioned for the push or the pull stroke, depending on the user's preference. Comes with the coloured comfortable grip. Takes the "M" blade HT08. Blade not included.

Also available for MINIATURE HORSES:

UPPER PREMOLAR HAND FLOAT 14 INCH

HTM03

• WHILE STOCKS LAST

UPPER PREMOLAR HAND FLOAT 12 INCH

HTA03

• WHILE STOCKS LAST

BIT SEAT HAND FLOAT 13 INCH

HT04

The bit seat hand float is 13 inches (33cm) long and has the back angled 2 inch (5cm) head for the blade to be set on the push stroke. It allows the careful contouring of the upper and lower second premolar teeth ("bit seating"). Takes the "S" blade HT09. Blade not included.

J-B WELD EPOXY GLUE

M06

Can be used on the slimline blade to attach to the slimline hand float. Recommended to anyone who is buying the slimline hand float, alpaca and miniature hand floats.

UPPER INCISOR HAND FLOAT 13 INCH

HT05

This hand float is back angled to allow the ideal angle and positioning on the upper incisor teeth for the 3.25 inch (8.2cm) head to be pushed by your arm. The total length of this hand float is a short 13 inches (33cm). The short length minimizes pressure on your wrists. Can also be used on lower incisors. Takes the "M" blade HT08. Blade not included.

LOWER INCISOR HAND FLOAT 13 INCH

HT06

This hand float is 13 inches (33cm) long with a 3.25 inch (8.2cm) head. It is straight to enable precise and easy strokes on the lower incisor tables and also on the lower canines. Takes the "M" blade HT08. Blade not included.

SLIMLINE BLADE

HT07

These blades fit the slimline hand float (HT02). They are 2.25" (57mm) long and have a medium sized cutting tooth. Comes with adhesive already attached to the back of the blade ready for use. Made in Australia.

SOLID TUNGSTEN CARBIDE 'M' BLADE

HT08

The "M" blade fits all EVDS hand floats with a 3.25" (8.2cm) head. They cut in one direction and can be set on the push or pull stroke. They are made in Australia from the highest quality tungsten carbide and can be re-sharpened two to three times.

SOLID TUNGSTEN CARBIDE 'S' BLADE

HT09

The "S" blade fits the EVDS "Bit Seat" hand float and has the ideal size of cutting tooth for the job. It is 2" (50mm) long and made in Australia from the highest quality tungsten carbide. These blades can be re-sharpened two to three times.

CARRY BAG

HT10

This Australian made, tough and durable canvas bag will prevent your tools from banging together and chipping the tungsten teeth on the blades. It looks professional and is very durable. Note: bag colour subject to change.

'S' FLOAT - SMALL

HTS1

7.8" (20cm) long and 0.75" (1.9cm) wide.

'S' FLOAT - MEDIUM

HTS2

11.4" (29cm) long and 0.75" (1.9cm) wide.

The "S" floats are two-sided files that are used for finishing and floating areas in the mouth that are difficult to reach with a standard float or large rasp. Made from copper painted regular steel with medium grits on both sides and both ends. Available in two sizes, Medium and Small.

UNIVERSAL MOLAR FORCEPS

CT01

Stainless steel 22 inch (56cm) forceps for extraction of the large majority of both upper and lower intact adult cheek teeth. Essential for any professional performing quality dental work in horses.

MOLAR SPREADERS

CT02

22 inch (56cm) stainless steel spreaders allow the stretching and fatiguing of the periodontal ligament mesial (in front) and distal (behind) to the cheek teeth. Essential in removing adult cheek teeth which are not already loose. Good for extracting retained deciduous cheek teeth which are worn down too much to grasp with forceps.

CAP SPREADERS

CT02.1

For extracting cheek caps. Can also be used for all Cheek Teeth. Stainless steel.

OLI'S STYLE CAP EXTRACTOR WITH SPECULUM OPENER

CT03

Suitable for removing retained deciduous cheek teeth in both upper and lower arcades. Also useful in removing most loose cheek teeth in geriatric horses. 15 inches (38cm) in length. Machined grooves on jaws can be used for opening McPherson style speculums. Stainless steel. *** WHILE STOCKS LAST**

UPPER MOLAR EXTRACTOR

CT03.1

22 inch (56cm.) stainless steel upper molar forceps. Concave jaws 1.5 inches (4cm) in height. Concave jaws are excellent for grasping a variety of sizes and shapes of lower teeth. Stainless steel.

CHEEK TEETH MUCOSAL ELEVATOR

CT04

Use to elevate the gingiva away from the tooth which is to be extracted, preserving the health of the mucosa and enhancing healing, also allowing a better grasp of the tooth with the forceps. Suitable for use with all cheek teeth. Comes with T-handle for extra torque. 19" (48cm) long, elevator tip is 1.9" (5cm) long & 0.35" (9mm) wide. Stainless steel.

FULCRUM EXTRACTION - 4 HEAD / 2 SHAFT SET

CT05

4 brass fulcrum heads of different sizes are permanently attached on 2 shafts. The heads rotate, so there is no need for left and right handles, allowing them to be used in both upper and lower arcades. Rods are high quality stainless steel, heads are A grade drop forged brass making them extremely strong and durable.

3 PRONG EXTRACTORS - ONSIDE

CT08

3 PRONG EXTRACTORS - OFFSIDE

CT09

Useful in extracting some fragments of fractured cheek teeth. The unique three prong claw is very effective in grasping geriatric teeth which are worn down to near gum level. Best to purchase both onside and offside. Total length is 19 inches (48cm). Stainless steel.

4 PRONG FORCEPS

CT09.1

These 4 prong forceps are our most universal molar forceps. Suitable for a wide range of tasks: removing some molar caps on young horses, molar extractions on middle aged and geriatric horses, also on some fractured molars, or abnormally short teeth. Useful for sagittally fractured upper cheek teeth. Wide handles to prevent knuckle squashing. Total length is 19 inches (48cm). Stainless steel.

COMPOUND RONGEURS

CT10

Compound rongeur with offset head for bone surgery cases. Total length is 13.7 inches (35cm). Stainless steel.

ROOT ELEVATOR - LEFT SIDED

CT11

*** WHILE STOCKS LAST**

ROOT ELEVATOR - RIGHT SIDED

CT12

*** WHILE STOCKS LAST**

Root elevators loosen the teeth in their socket. These can be used on incisors and some lower wolf teeth. Total length is 6.2" (15.5cm). Blade width at widest part is 0.19" (5mm). Stainless steel.

RETAINED ROOT ELEVATORS - SET OF 4

CT13

Left, Right, Rostral and Caudal elevators for molar fragments, cap silvers and lower wolf teeth. Total length is 16.5" (42cm). Stainless steel.

MOLAR FRAGMENT EXTRACTOR

CT15

For extraction of molar fragments when the tooth is no longer intact. Total length is 19 inches (48cm). Stainless steel.

CHEEK TEETH INSTRUMENTS

DOUBLE ENDED PROBE

- 5 INCH/12.7cm

• WHILE STOCKS LAST

CT16

Has hook on one end and blunt probe on other. Handy for picking feed out as well as removing plaque from canine teeth.

MAXILLARY BUCCAL SLAB FRACTURE FORCEPS

CT17

Suitable for lower 11s in some cases. Is also a "turning tool" for rotating young adult teeth during extraction. Total length is 22 inches (55cm). Stainless steel.

FULCRUM SERRATED JAW BOX JOINT FORCEPS

CT18

For extracting the 06's. Knurled handles for extra grip. Total length is 22 inches (55cm). Stainless steel.

MULTI-TIP ELEVATOR KIT

CT19

For loosening cheek tooth root fragments of various depths and can also be used for lower wolf teeth. Stainless steel. Comes with carry case.

CHEEK TEETH ROOT TIP COMPOUND FORCEPS

CT20

Used for extracting root tips. Can also be used on loose slab fractures. Has a spring which helps avoid applying too much pressure, helping to eliminate breakages. Total length is 16 inches (40cm). Length of claw is 2.15" (55mm). Stainless steel.

SURGICAL EXTRACTION

BONE Mallet

17cm long, head diameter 4cm.

N11

CURVED BONE CHISEL

N12.1

Total length is 6.8 inches (17.5cm), curved blade is 0.27 inches (7mm) wide. Stainless steel.

STRAIGHT BONE CHISEL

N12

13.5cm long, blade width 1cm

MOLT #9 PERIOSTEAL ELEVATOR

N14

Mainly used to lift full thickness soft tissue flaps. The tips require protection and need to be kept very sharp otherwise shredding of the flap can happen. Total length is 7 inches (18cm). Stainless steel.

ORAL SPOON CURETTE

N15

Total length is 6.4 inches (16.5cm), widest part of spoon measures 0.3 inches (8mm).

PULP CAPPING GEAR

PULP CAPPING KIT

PC01

Includes: 2.3mm diam ball burr, collette to hold burr in PowerFloat, Beaver tail, Spoon excavator, Spatula for cement, 120 Paper Points and mixing pads. Calcium Hydroxide is NOT supplied in this kit (available from local dentists or suppliers).

BEST VALUE

2.3mm DIAM BALL BURR

PC02

The small ball burr (2.3mm diameter) is inserted into the collette PC03 (sold separately) which is then screwed into the Powerfloat to hold it into place. Used for pulp capping.

COLLETTE

The collette holds the small ball burr PC02 (sold separately) in place in the PowerFloat.

PC03

SPOON EXCAVATOR

PC04

6.7 inches (17cm) long.

BEAVER TAIL PLASTIC

PC05

Stainless steel. For use in pulp capping. 7 inches (18cm) long.

SPATULA

PC06

Spatula for cement application. 7 inches (18cm) long. Stainless steel.

PAPER POINTS

Container of 120 x size 90 paper points.

PC07

MIXING PADS FOR PULP CAPPING

200 leaves, 1.3 inches (3.5cm) x 1.3 inches (3.5cm).

PCMIXPAD

poskom

Millenium Technology

The Portable X-Ray Generator that works with you, wherever you are!

The VET-20BT Hybrid battery Portable is the lightest, most compact hybrid battery powered generator and the most advanced portable X-ray unit in the market today.

The Poskom Vet20 BT delivers:

- Lightweight—only 6.8 kg!
- Small size—only 36 x 20 x 17 cm
- Freedom of use—powered by a high capacity lithium-ion polymer battery, no 240V power necessary when using in the field or in the clinic!
- Zero clutter—no power cables makes it safer to use around the patient and less hassle for you
- Wireless—with the optional R/F module, the Poskom Vet20 BT can be interfaced wirelessly to Eklin DR Units, making cords between generator and DR plate obsolete!
- Long-life battery usage—around 300 x-ray exposures can be made per battery charge—batteries recharge 3.5 hours approx.
- Point and shoot—Poskom Vet20 BT can be programmed with your favourite settings, removing the need to adjust the exposure controls with every use

Taking X-Rays has never been easier!

The perfect X-Ray solution for busy vets,
whether in the field or in the clinic!

EVDS

LEVEL 1

ESSENTIALS OF EQUINE DENTISTRY

5 Day Introduction to Equine Dentistry for Veterinarians

Horse owners demand high quality dentistry at affordable prices for their horses, and we can teach you how to deliver it! We know the art, science and marketing of equine dentistry intimately!

- Having hosted over 650 equine vets over the past 18 years at our training workshops, the EVDS teaching team is absolutely dedicated to ensure that every vet who attends our 5 day workshop returns to their practice confident and competent to go out and perform quality routine dentistry. Our **proven** combination of lectures, dry labs,

and practical sessions on cadavers as well as live horses, allows your knowledge and confidence to grow over the five days, and this reinforced knowledge and new skills **WILL** stay with you.

LEVEL 2

INTERMEDIATE EQUINE DENTISTRY

Take the next step in your Equine Dentistry career!

At our four day **Level 2 Intermediate Equine Dentistry workshop** we guarantee to pass on the skills you need to treat the more complex cases you see and expand your treatment options. Inspire your confidence and take the next steps towards total mastery and fulfilment through performing equine dentistry properly. **Prerequisite of Level 1 Essentials workshop attendance applies.**

- Incisor extractions
- Periodontal disease including diastema burring, cleaning and packing pockets
- Anaesthesia and nerve blocks
- Wiring of incisor luxation fractures
- Maximizing success in extraction of cheek teeth and what to do if things go wrong.
- Radiology and radiography in lectures and in real cases
- Oral examination – being sure you are not missing too much!
- Practical oroscopy including intra-oral instrument handling
- Odontoplasty in performance horses
- Mastering the art and science of dealing with geriatric dental cases
- Pulp capping
- The challenges of Sinusitis workup
- Symptomatology – pathogenesis
- **And much more!** Space does not permit a full list of Level 2 topics.

If you think you have enough experience in the field to attend Level 2 or Level 3, but haven't completed pre-requisite workshop Levels, you may still be able to attend by applying to EVDS for special consideration.

LEVEL 3

MEDIUM EQUINE DENTISTRY

Join the best in the business and share the skills of top equine dentistry

At our Medium Equine Dentistry workshops, our equine dentistry experts will share and focus on the high level techniques and skills that have made them the best in the business. If equine dentistry is in your blood, and top quality equine dental care is your goal, don't miss joining our medium workshop groups for cutting edge knowledge and experience. **Prerequisite of Level 2 Intermediate workshop attendance applies.**

LEVEL 4A & LEVEL 4B

ADVANCED EQUINE DENTISTRY

The final 2 levels of EVDS equine dentistry provide a forum for advanced surgery skills to be shared and further refined.

Lectures and practical sessions will cover:

- Ongoing use and techniques in oroscopy
- MTE extraction - in-depth training
- Buccotomies - how to do them confidently and competently
- Minimally Invasive Repulsions
- Mandibular and maxillary repulsions.
- Sinus Surgery
- Reconstructive oral and facial surgery
 - Tongue lacerations

- Mandibular fractures
- Sinus fractures
- Techniques for repair oro-nasal and oro-antral fistulas.
- Tumor excisions in the equine mouth.
- Commissurotomies to aid in extraction.

Registrants will work in pairs in the practical sessions, with one tutor to every 2-3 registrants.

And that's just LEVEL A4.

Prerequisite of Level 3 Medium workshop attendance applies.

If you think you have enough experience in the field to attend Level 3 or Level 4A/4B, but haven't completed pre-requisite workshop Levels, you may still be able to attend by applying to EVDS for special consideration.

www.toothfest.com

Early bird Savings running right up until 2022

Set on the beautiful Coffs Coast, Opal Cove beachfront resort will provide the backdrop to Toothfest 2022, our cutting edge conference offering a unique opportunity to veterinary professionals. Showcasing new techniques and research from world leaders in dentistry and surgery of the head Toothfest 2021 is the event you won't want to miss!

"What's New" Equine Lectures will be run at the same time as "How to" Small Animal Dentistry Lectures, allowing attendees to mix and match their own selection of conference content to their needs and personal interest.

How to & What's New in Equine Dentistry (and some small animals too!)

If you are:

- Already enjoying Equine Dentistry, but want to update your knowledge and learn more...
- New to Equine Dentistry and want an overview of what it's all about and how to start providing equine dentistry services for your clients..
- Already experienced and knowledgeable in equine dentistry, and interested in keeping abreast of new techniques and research from world leaders in dentistry and surgery of the head...
- In mixed practice and are more interested in practical knowledge you can apply directly to your cases, more than cutting edge knowledge and techniques...

Then TOOTHFEST is for you!

PORTA SAFE STOCKS™

MANUFACTURED AND SUPPLIED BY

EVDS

The PROFESSIONAL EQUINE VETERINARY MOBILE WORKSTATION of EXCELLENCE

Continuing the revolution in professional care and treatment of
the horse, delivering unparalleled safety, efficiency and versatility.

Extensively field-tested across Australia and NZ
Refined and improved from professional user feedback!

Born out of necessity and sourced from ideas from vets and horse owners worldwide, the Porta Safe Stocks answer the need for a safer and better way to perform a variety of equine veterinary and husbandry procedures. Porta Safe Stocks increases the safety, efficiency and versatility of common procedures, and is a true revolution in the professional care and treatment of horses.

No more risky business of wrestling with animals! Using Porta Safe Stocks, horse stress levels are minimised, allowing a faster, yet more accurate and thorough procedure, while safety for both

horse and handlers has been given top priority. High levels of PPE and Biosecurity can be achieved using this trailer!

The feedback from clients who have experienced the ease of using Porta Safe Stocks has been phenomenal. For them, the Porta Safe Stocks has become an indispensable tool, allowing treatments and procedures on a regular basis that would not be otherwise possible.

If you truly are looking for the best care for your horse, the Porta Safe Stocks are a must.

All sizes of horses catered for

From minis to draught horses, all sizes of horses are safe and comfortable in the PSS. It is purposely open and non-threatening. Quick release latches on the gates on three sides ensure the horse can be released quickly.

Eye-work and oro-facial surgery

The head support beam allows easy use of a dental halter with chin support. From here, eye examinations, tear duct flushing, along with a wide variety of oro-facial surgeries can be performed in the standing patient.

Endoscopy

Endoscopic examinations can be done in a safe and relaxed manner. The horse, vet, handler, and equipment remain safe - ensuring full concentration on achieving an accurate diagnosis.

Dental work

Performance dentistry is well recognised to be essential in maximising comfort to the horse whilst eating and when bitted. By having the horse sedated and in the PSS, an accurate examination, diagnosis, and treatment can be done—every time, on every single horse!

Ultrasound Scanning

With the horse contained in the PSS, it will stand still and allow the vet to scan tendons and other parts of the body. This is best done in a shady area.

Radiography (X-rays)

Horses need to stand still to be x-rayed. This is easily done using the PSS in a shaded area. The x-ray machine stays safe throughout the procedure.

Mini Power Floating

Ponies get lots of dental disease. For the best treatment, a thorough examination and accurate diagnosis needs to be done first. This is best done after the mouth has been flushed. From there a strong light, dental probe and mirror will allow a proper diagnosis. The PSS makes this process a simple task.

Miscellaneous Vet Work

Abdominal taps, stomach tubing, skin tumour removal, stitch-ups, colic treatment, caslicks operations, standing castrations, hoof abscesses can all be done safer, faster and cleaner in the PSS. The stocks can be disconnected and reconnected from the trailer in just minutes.

Reproductive Work

Ultrasound in mares and pregnancy testing is a breeze on any farm using the PSS. Uterine swabs, flushes and biopsies can all be done immediately and cleanly - using the trigger hose and ample bench space. Artificial insemination of the mare with chilled semen at the owner's home can also be accomplished.

Night Operation

With spotlight covering the work area, and interior lights in the lockable PSS storage compartment, night calls become more manageable. The trailer is easy to reverse and tows like a two-horse float. Even at night the trailer stands out and attracts attention, making it a potent mobile advertising medium. There is plenty of room for practice signage.

Your Mobile Work Station

Other features of the PSS include:

- Hot dip galvanising of trailer and crush
- 100 litre water tank and electric pressure pump
- Electric brakes on the trailer
- Dual axle wheels and springs
- Three work benches
- Large lock-up storage compartment with easy access.
- Option for digital weight scales to be installed, with the read out in the safe confines of the lock-up tool box

From pulling up on the farm, the whole station is set up in less than 3 minutes.
